WORK EXPERIENCE

Co-Founder & Web-Developer   2024

WiyoRent

As the co-founder and web developer of WiyoRent, I built a mobile-responsive platform showcasing student-focused house listings in Rwanda. The site handles diverse data, including images, listing details, and prices, ensuring comprehensive user access. I utilized HTML, CSS, and JavaScript to create an intuitive interface optimized for mobile devices. Since launching, the platform has served over 40 students, and this project has significantly enhanced my technical skills in web development, data management, and responsive design.

                                                              2024

Tech+ Trust Web-developer

As the web developer for Tech+ Trust Ltd, I use HTML, CSS, and JavaScript to build and maintain a mobile-responsive platform showcasing incubator listings and product details. The company helps poultry farmers reduce losses with incubators that ensure a 95% hatching success rate. I manage data like images and specs to provide easy access to product information. This ongoing role has strengthened my technical skills while supporting a company that improves agricultural productivity for local farmers.
